

REUSABLE RESTRAINING DEVICE

MAIN CHARACTERISTICS

Reusable restraining device serves as a precursor restraining device to typical handcuffs as it secures individual's arms close to his body and therefore makes the person less dangerous and the application of handcuffs faster and easier. It is also possible to use reusable restraining device to secure an individual to various kinds of chairs or seats such as those found in aircrafts. Reusable restraining device markedly increases the effectivity of on-duty actions and the safety restraining as well as restrained individuals. Was developed for police forces, prison services, municipal police, military, security agencies and various crews.

TECHNICAL PARAMETERS

Traction resistance	More than 200kg (440 lbs)
Operating temperature	-40 °C - +85 °C (-49°F - 185°F)
Stiffener	Strip reinforced with lass fibres
Material inflammability	Corresponds to UL94-V2
Resistance	Extreme drop resistance Increased UV resistance Increased weather resistance
Weight	270g (0.59 lbs)
Service life	More than 1000 usages

ACCESSORIES

Tactical Bag

Tactical bag is a special pouch with MOLLE system that merges functionality with effectiveness. It was designed for police and special forces.

Tactical bag can be worn :

- Over the shoulder
- On a belt
- On a thigh panel

Thigh panel with MOLLE system
